Ana Radzevicius - **00:00**

Envision it in the initiative with the 10 organizations that I imagine you are still like thinking about this agenda and this capacity building. So it's just like a little bit of showing and then brainstorming and understanding how it can align. Does that make sense?

Martin Wainstein - **00:19**

One thing to cover today that we didn't quite cover it well in our last chat, Fernanda and Julia, is how do we strategize the alignment and collaboration with the local government, including Office of Innovation and the Secretary of Planning. I don't know which one it is.

Ana Radzevicius - **00:43**

Planning and Management.

Julia Caon Froeder - **00:46**

We're talking about the city or about the state. Or about both.

Martin Wainstein - **00:49**

I would say the city. Yeah, just let's start with the city. And that's because the state will ideally come in for more large scale funding liaisons. But ideally, one cannot plant a single tree without city buying.

Fernanda Scur - **01:14**

Yeah, Martin, I can speak to that. So I am currently working on a narrative, so I was hoping that also this, another call that we're having today will, you know, feed my systemic narrative of Cougar as a whole. Because on the week of April, on the week of 27th of April, Kami is coming to Porto Alegre. So I will use that as an excuse to reconnect with these stakeholders. So my plan is early next week, send introduction emails to Kami and kind of like revamping, you know, hey, this is what we're doing. We are advancing, we're working with Villa Flores Open Earth foundation platform, and Cami is coming to Porto Leg next week.

Fernanda Scur - **02:08**

So I will use that to reconnect, see who is, who has the appetite, decides to maybe meet in person or virtually so we can kind of like, you know, get, you know, back on.

Ana Radzevicius - **02:22**

That.

Fernanda Scur - **02:24**

Rolling the ball in terms of what we're doing, making them, you know, aware of what we're doing, understanding if there's anything that maybe they want to, you know, say, so we can adjust course that, you know, brings more value to them, etc. Etc. So just so you know, this is on the agenda.

Martin Wainstein - **02:46**

Yeah, I know. Great. I know Cam is going there and I also nudged her to put attention to this because we had a chat yesterday, I think, with Andrew Kami, and we needed to reiterate how important that is because city government is just key for this to happen, both in the design of a project, but also in the operation later on.

Fernanda Scur - **03:12**

Yes, exactly.

Martin Wainstein - **03:14**

It's. It's critical. One thing that would be good to hear from you, Fernanda, is what was the next step with Luis Carlos's office after your in person conversation? With Yash there. But before going into that, maybe we. Let's put that as part of the agenda. We'll open up after.

Antônia Wallig - **03:33**

Okay.

Martin Wainstein - **03:33**

Going through the.

Ana Radzevicius - **03:35**

Okay.

Fernanda Scur - **03:36**

Because my point is going to be actually on that.

Martin Wainstein - **03:38**

So yeah, I could write like, I could write Rovana and Svamos, but I'd rather do it once we have which of the three should be our anchor partner and then how to make visibility to the others. But yeah, let's, let's follow. Maybe. Anna, you want to put the proposed agenda the way that you said it with this we can cover it and. Hi, Antonia, welcome. Good to see you again.

Antônia Wallig - **04:08**

Hello, everybody. Thank you.

Ana Radzevicius - **04:11**

Hi, Antonio.

Martin Wainstein - **04:14**

And I'm seeing Giulia drinking mate, so I am tempted to go prepare my own mate while. Yeah, this very shiny green mate, Julian,.

Julia Caon Froeder - **04:24**

I understand that he's drinking also.

Antônia Wallig - **04:27**

Great. Beautiful.

Martin Wainstein - **04:28**

Yes, but it's a very different mate, the one we have.

Julia Caon Froeder - **04:33**

What do you have in Costa Rica? I mean, it's Argentinian.

Martin Wainstein - **04:36**

No, my. I have Argentinian mate. But the, but the Rio Grande mate is. I. I don't think I'm green. It's green.

Antônia Wallig - **04:50**

Big mate. You need a lot of technique to make it.

Martin Wainstein - **04:55**

Yeah, that's. I'm more used to the Uruguayan mate, which is big. And you have to. You do it in the same way, in a split approach, but it's not as. It's not as bright green as that one looks like.

Joaquin van Peborgh - **05:11**

Matcha, right?

Martin Wainstein - **05:13**

Yeah, exactly. Yes, exactly.

Ana Radzevicius - **05:15**

That's my type of mate, Matcha. So I'm just throwing here in the chat. So I understand that we first will have Joaquin presenting us the tool and with a little bit more time because were in a rush last time. And then we go for the discussion about engagement with the City hall and different institutions and how we should position our next steps for them. Right.

Joaquin van Peborgh - **05:46**

Yeah. Perfect. Before I start maybe going into the tool itself, a lot may make sense. I can repeat back some stuff I think is true. And at any point you can interrupt me say, like, actually not as much. Right. So the way I understand it is Villaflores could have a role as a coordinator of different, you know, community based, neighborhood based organizations that each of this has their own initiatives that are trying to carry forward, and especially initiatives that have some relationship to nature based solutions. Right. Does this sort of make sense?

Joaquin van Peborgh - **06:29**

Okay, so if that makes sense, the way we think about our tool or what we've built is the way we see it and how we have structured the cooler from the start is how do we create a set of initiatives that can be grouped up and funded, which are community owned, but also sponsored by the local government to make sure that funding can come in. Right. Sort of like trying to get the city level and the community owned initiatives into the same sort of portfolio or combination of initiatives, that those can be packaged in a way that they can go look for funding that

maybe independently they wouldn't be able to. Right. So that means there's some financial intelligence as well, financial design that helps collect these initiatives into something that's bankable and fundable.

Joaquin van Peborgh - **07:32**

So with that in mind, we started first thinking about what do you need to actually prepare, at least from the city level? A concept note which shows this is a project that's actually fundable. Right? And that's very from the city level. But there's a lot of things that need to happen before the city has a collection of the initiatives, Right. So what I showed before was more at the city level, right? So were showing, okay, like this is the whole city, these are the areas at risk. This is the collection of all the initiatives. This is how I draft a concept note that then I can go to a funder and show and say, like, hey, give me money, because I will have this impact and I will maintain it this way and this will be, you know, how I've done it.

Joaquin van Peborgh - **08:18**

What I want to show first is maybe the other way around and more on the mindset of what Villa Flores could be doing and how we could support Vilafres in that, let's say, endeavor. And everything you see, instead of thinking about it like this is useful as a whole or it's not useful, is what parts are useful, what parts would be useful if we change what can help, right? So in essence, this tool helps you prepare nature based solution projects or collection of nature based solution projects. It has three ways of using it. For now, this is more in a mental map than maybe what the tool needs to actually be. Right? But if we engage with the city, how does the city engage with all the programs that have it mapped?

Joaquin van Peborgh - **09:12**

How does an individual community sort of map what they want to do and get support to do what they want to do? And then how does the coordinator, or in this case orchestrator, which would be Villa Flores, sort of interact with maybe the two levels? Right? So the first view, this one is the most preliminary, the one that has least work done, because it depends on what you will share with us. But let's say, for example, someone from Villaflores is coordinating this project, right? What they could see is, let's say they're working with four different community based organizations. This is on sample organizations and they could be mapping. Okay, this is where they could be working. Probably doesn't really make sense the locations, but let's imagine, you know, they can be closer to Floresta or the area of work.

Joaquin van Peborgh - **10:07**

You could see what they've done so far in the tool, right. So in the other part we'll see, it's like, okay, have they actually completed their sections or have they actually, you know, done their diagnostic or have they, you know, shared the information? Have they chosen a site or not? For example, this one, let's say, has been invited, but hasn't started and done anything. So this would be a way of thinking about, okay, how can we coordinate different communities, see their state, so we can manage the project. Right. So I will stop there if there's any questions, comments on seeing if this makes any sense. Doesn't make any sense. And from that we can also think into what should be improved.

Julia Caon Froeder - **10:49**

I do have one question, Joaquin, is for the Orchestrator to have information, the community based organization needs to develop their profile first and then the projects in.

Joaquin van Peborgh - **11:04**

The case we have right now. Yes, but maybe there's other things that you say that you can tell us is like, hey, we actually need. Because this could be different, right? We're assuming here you already have mapped the organizations. Maybe something you would like to do is like, I want to know in which neighborhoods I should go and look for organizations. Maybe that changes the right things. Because what I could show, maybe here is like, this is the map of Porto Alegre. These are the highest risk neighborhoods. This is where I recommend you go and find more organizations. That could be something, right? So these are things for us to talk about and hear from you. But. But in this sense, yeah, you're sort of like receiving what they're sharing.

Joaquin van Peborgh - **11:48**

But maybe there's other things as you could be saying, hey, actually I want this to be more proactive, less reactive. We can think about what the tool should be as we go. But for now, this is just, as I said, an example. And you can see it here. Help us design this. It's just like we're testing it out with you, right? So if there's more things you would want to see, like what else would you want to see that's super valuable to us, but everything in time you can also, I can show things you can help the can't. And then we can see where it goes. You don't need to have any answers right now. What's more valuable is like the questions you have, that's useful also Fernanda as well, Right. If there's already things you're seeing as well.

Joaquin van Peborgh - **12:31**

I've already shown a lot of things to Fernanda, so she's used to me showing her new. New tools. So very. Yeah.

Julia Caon Froeder - **12:40**

This map, it's. Is it a way that it's public? Because we, for example, were just talking on the Palafita project, on having a public map on all the organizations that we are working, like all the relations that we are building with them, not exactly projects, but connections that would be nice to show the society what's been going on. So question is it possible that this map has an online version open for everyone to see, or this is just a management.

Joaquin van Peborgh - **13:11**

No, definitely. I think that's a great idea and I think that's a great use case. Right. How do you show back to the communities that what you're doing, how it's being sent? That's a great idea. I think definitely we could have, you know. Okay, this is the management view, this is the public view. These are the things we want to showcase, highlight the. There's probably a lot of community engagement work that you want to do, that you want to show. Those are things that we can definitely work on and do. So any ideas you have there that would be useful for you, for us to help you on your, let's say, online presence is something we can definitely do.

Julia Caon Froeder - **13:46**

And the last one before I pass it on to Antonia is we know that the city already has lots of projects that are like being directed to some regions specifically. So can you show us the amount of money that is being planned to be invested in specific parts of the city and which parts are not covered yet on the projects that are already public and confirmed and going on? So we can even cross that with the risk areas, et cetera.

Joaquin van Peborgh - **14:15**

That would be an amazing idea. And we hadn't thought about that. I think that mapping would be super useful for. For this. Yeah. If you have that data available somewhere, like a table or someplace where we can find it, we can. We can prepare a map of that. Well. And show it to you. Definitely. Yeah.

Julia Caon Froeder - **14:32**

I understand that those big projects are from international funds, so like BID and the World bank and all of that and Caf and. Etc. So I don't know if they. They make it public, but we can.

Joaquin van Peborgh - **14:44**

Look into them as well. Yeah.

Fernanda Scur - **14:47**

Just because. Sorry, Antonia. Just because it's right. Related to you, Julia. I know that. And Martin, maybe you know, that is as well that I think the qualizone has something like that already, or phone Higgs or something that we can look it up. I don't know if it's the way you are talking, but there's something already. I will see if I can find it. Sorry, and just.

Ana Radzevicius - **15:11**

Sorry, a question. It's really related. Also, Julia, when you ask about this project, you are referring to the projects that are planned to happen inside the fund of 7 billion reais that are being managed by the Secretariat of Planning and Management, or you're talking about like broader scope of projects that Porto Alegre is receiving from everywhere and anywhere.

Julia Caon Froeder - **15:38**

I mean, I have no idea because I understand that some of the projects are part of a specific strategy and others are not. Exactly. But if we could maybe create labels on the concept of resilience and communities, like safe communities, we could have lots of projects on sewage, on draining, on nbs, different kinds of projects that create this resilient community that we can understand what are the plans for the city and which is the territory that covers? Because I understand that's lots of projects for some specific regions of the sea and lots of other cities that really have high risk areas are not covered. So would be interesting to see that.

Ana Radzevicius - **16:23**

Yeah, not only for us, but I think that would be very interesting for the City hall to have this information, especially the one that is managing this fund. And we can use it to like say I. I really see it in. In the workflow. Right. You. They need to give us this data, because I think I know a little bit the database of the multilateral banks. It's really messy, it's public, but it's like grasping for data. So I don't think we have like the time to do that.

Ana Radzevicius - **16:56**

But if the City hall, and I assume they do have the secretariat that has this fund already, can give us this layer, we could do this overlap of risks and funds that are already planned to happen and really indicate where it's not covered and to Joaquin's point, then help you to identify where are the city where the part of the city that you should like, look for organizations and communities to engage because they are uncovered. Right. Sorry, Antonia, you are too long with your.

Antônia Wallig - **17:28**

No, it's so fine. Because everything is really connected. And I think this idea is great, especially because we are an organization based in a community and we suffer a lot from that kind of cross information that we can. Even if we are an organization with this level of information that we have, with the connections to the government, with the connections to a lot of organizations, it's very hard for us to get the whole picture of what has happened. So it's really good if the platform in some instance can have all of those informations of this variety of funds. You know, the international funds that are possible to come for these areas and in which things they're based on, but also the funds that have. That are being already used, for example for construction. That.

Antônia Wallig - **18:32**

That is what is happening in our territory now in the 40s. And we have like isolated informations from. From each of the secretary that one secretary is gonna do the draining part. The other secretary is gonna do the. We call the makeup. But there is a technical for that urbanization, whatever strategic urbanization tactic urbanization. But.

Fernanda Scur - **19:04**

For.

Antônia Wallig - **19:05**

For real is the makeup. And other secretary will do like the tourism plan. And they don't talk and we don't understand how they are using those funds because everybody talks about the same fund. And we don't know how is this going to affect the community in a practical way. So I think the platform can help a lot to have all of these different scales of funds that are possible to come. Funds that are. That are already being used in a intention of transparency for the communities in the. The city. And I think we can help with that because we are either involved with the organizations and with the government, so we can like.

Joaquin van Peborgh - **19:59**

Some.

Antônia Wallig - **20:00**

Some mysteries that you know. And the platform is a great tool that we can put the things. How they are of course with the. How do I say? The. The okay. From the government. Okay. Can we. Can we say for everybody that this has been used like this and like that because they. They don't have this communication and this kind of organized communication with the. The population. Well, everybody knows about that. It's not a. It's not a Porto Allegri thing only. But I. I also wanted to tell that we have good examples of course in Brazil. And the map. The map up the mapping of the Pontus de Cultura, which is a federal law. It's a very good example for the platform to have a look at because it works really well in the way you catastrate organization as a Ponte de Cultura.

Antônia Wallig - **21:03**

And that's how you can see the. The other points and what they do. This is very nice. I think it's a good example that we can have a look at to. For the map for the mapping of the organizations.

Ana Radzevicius - **21:21**

Yeah, perfect. I have a question to Fernanda specifically thinking about what we just brainstormed here of what the platform could do and would be useful for the communities to use and mobilize to create nbs projects. I understand that the main stakeholders that we would need the buy in is the Office of Innovation because I understand that they would like play this role of inter institution mobilization and getting the data. And at the same time I also see that because you mentioned that Koalizone had something similar. So I see that beyond the City hall and of course the Secretariat of Planning and Management is also important. But I want your opinion. Would do you see the Office of Innovation has a good entry point to propose that and then they could like engage the other secretariats and then we in parallel engage the coalition.

Ana Radzevicius - **22:25**

I know I am a little bit going to the other bullet point, but everything is so connected.

Fernanda Scur - **22:30**

Yeah, yeah, I would say so. Because right now they are the ones that have been doing at least the most visible to the public eye. As you know, Antonia is mentioning, it's not a strong feature of Porto Alegre. They have been doing a lot of that community work. Right. They are advertising the hubspoa, which is like the community hubs poa, which is kind of like Brazilian territories. Actually, Julia and Antonia, I sent a message to Clayton asking what's the difference? Or if it's something that's, you know, coming on in replacement to that. Trying to understand. But yes, I believe so, because Ismamus, the environmental office, when I spoke to them earlier, you know, it's not their thing to look at community, right. It's. It's more siloed.

Fernanda Scur - **23:23**

So yes, I would say they would come in maybe through innovation as you know, a partner department or something. They are the office, I think that could play that role of the convening role, if you will, within the government, the public infrastructure that we want to engage.

Antônia Wallig - **23:46**

So maybe Julia has here is that.

Julia Caon Froeder - **23:50**

I understand that in the city nowadays we have different groups of people working differently. So I understand that it's MAMUS and the management of all the contractors, the building secretary that is managing all the things that is happening in the city, from very small things to very big things are kind of one silo. So they work together. So the Secretary of Environmental is very close to the Syndicate of the Constructors. So he's best friends with the civil engineers from the city who are going to, you know, he received the money to do the things in the city and they worked together with the Secretary of Obras. So I think that here we have one part of that. I was last week at the

Municipal Plano Municipal, which was a planned university created from federal money and et cetera.

Julia Caon Froeder - **24:50**

And they have an 88 million budget of very needed Civil engineer, things to happen in communities, very poor communities than most of them. So they already have the budget to put that in practice. And it connects a lot with the Secretary of, with the Civil Defense, of course, but also to the Secretary of Habitation who is the guy that is management, Yodo. So I think that for each kind of thing that we are going to talk about, we are going to need to engage with different secretary from the municipality because I understand that my opinion for the Innovation Office is that they are connected to, they're not connected with nbs, they're connected to the tech community. And just seeing that innovation is tech and not all the other parts of the public policy that is needed that is actually being developed. So it's tricky.

Julia Caon Froeder - **26:01**

I think that for each topic that we are going to be talking about, for example for drainage for infrastructure in the city is the Mai, which is the company that is going to be sold to the nowadays is a public company, but it's going to be a public private company. And they are dealing with the huge money from drainage from those international banks. You know, I think it's. I'm not sure if you're going to find one person inside the city that can manage everything that we are talking about here.

Ana Radzevicius - **26:37**

Fernando.

Fernanda Scur - **26:38**

Yeah, Julia. I just wanna, I wanna add that, well, we do need, you know, one that can maybe direct who we should be talking to in different instances. And the reason why I still think Innovation Office could be the best one because they know already, Cougar, they know, they've been, I mean I've been speaking to Luis Carlos at least four or five times about this particular program and he always was open, you know, yes, come to us, talk to us. But what I want to say is that the last time we spoke to them and I was able to gather in the same room as Mamuz, I don't remember the other secretary and Innovation Office, Clayton was there as well.

Fernanda Scur - **27:22**

And the reason why today we are kind of focusing on nature based solution, it came out of that meeting and also the meeting that I had previously with the Reconstruction State Secretary. So the idea here is that we're trying to find a common thread that can attract the interest of the different levels of stakeholders that we want. And yes, NBS solutions that can be something technological as well, something innovative as well if we think, you know, more broadly and he was very sympathetic and said yes, go ahead, do it. I don't know if Martin remembers, but

when we got out of that, so I would still, you know, go and Talk to them and see. And of course, I. By all means, I think everyone needs to be involved, even, you know, maybe the secretary that's kind of handling all of the.

Fernanda Scur - **28:16**

I just pasted here a PDF that maybe you can see. It has a detailed overview of how they. Where, you know, the 7 billion high is going to. And maybe we can actually have a conversation with the people that are kind of, you know, managing all of these funds. Someone is centralizing, because now they call it Po Futura. It's one big program where all of these development funds are embedded into. So maybe we can, you know, talk to the guys. And I did the print screen when I watched them on the South Summit, so we know who they are. So maybe we can set up a meeting also to present the project.

Ana Radzevicius - **28:56**

They are the Secretariat of Planning and Management. Just to confirm, I think.

Fernanda Scur - **29:00**

So it's Ezra Shirmer. And yeah, he's the man of the money. But on the panel that I saw, there were other people that were more like the operationalizers or executors or planning committee kind of people. I can. I need to go back and check my. My print screens and get those names. And I think that those are the guys we want to talk to right now.

Ana Radzevicius - **29:26**

Right.

Fernanda Scur - **29:26**

Not Cesar in itself, but yeah, there.

Antônia Wallig - **29:29**

Is Germano and Havana, which is very connected also.

Fernanda Scur - **29:33**

Yeah, Not. No, it was like I would check out here is. I mean, they already know also. I mean, Havana, we've been speaking to Havana as well. So they are all aware. I think for me, the important thing is that all of these actors, including the ones that Julia mentioned, they need to be aware of Cougar. Right. There is. There needs to be an instance in which we kind of provide them with information of the ongoing process, but then there will be some key stakeholders because we want to make sure that this is somehow something that, you know, it can become part of the public, you know, infrastructure, policies, whatever. Right. So who are these guys specifically?

Fernanda Scur - **30:16**

So it's kind of like a matter of understanding these players and then defining the roles and then engaging, you know, at the different stages or the different levels with them accordingly.

Julia Caon Froeder - **30:27**

My last question here. Do we have that Porto Alegre coalition from universities, whatever that. I forgot the name.

Antônia Wallig - **30:36**

Pacto Alegre.

Julia Caon Froeder - **30:37**

Pacto Alegre. Because I understand that Pacto Alegre is kind of the coalition in the city, and the coalition is from a state level.

Antônia Wallig - **30:50**

I think this takes us to a place where it's so important to understand how the platform will be divided in these sectors, like the community projects portfolio. Is one very important sector, then maybe the government projects that are already happening and then who is going to fill the platform with this project and how. And then I think it's really nice that maybe we can now have a look of how these sectors can be divided. So when we look at the whole platform we understand that all of this is contained and then when we have this general look, we understand all that is happening in SBNs and climate changes, infrastructure and projects and opportunities of funds, you know.

Joaquin van Peborgh - **31:47**

Yeah, that's a great point to carry on. I know. Martin, if you wanted to say something before that if I can go into the. What we propose could be the community view and get, you know, some thoughts based on how, you know the communities, who can be, you know, the representatives of the communities, etc. I don't know Martin, if you have.

Martin Wainstein - **32:07**

Something I can go after you Hogin, because I thought maybe you covered it.

Joaquin van Peborgh - **32:14**

Sure, yes. So we show what the coordinator view could be and I think there's a real of great ideas that are coming up that we can work on. The part I wanted to show is something we showed before, but basically is how could a community sort of interact or share what they're doing, share if they need help, etc. I'm thinking that probably makes sense for it to be as simple as possible and just like as linear as possible in which they need to do one thing. So I will show that flow, which is the. It's a flow, which is a guided flow in which the user and here. So I want to hear also about who do you think could be the users in the specific communities to also see if we can either be more sophisticated or we need to be less sophisticated.

Joaquin van Peborgh - **33:06**

Like how much can we expect people to handle. But basically what this flow could be, let's say is say there's a community and they want to share something. And this is what I shared before. It's like they can sort of do a diagnostic of how ready they are for a project. Right. So in this case how they would work is they would start the flow, right? And this will start getting information for them and they would fill out who they are, where they're working, what are they doing, what's their project, what's their expected impact, if they've thought about how to operate their project or what happens after year one, what they need and if they've done anything so far. So idea is.

Fernanda Scur - **33:54**

This part of the.

Julia Caon Froeder - **33:55**

Profile of the organization before putting on projects? Right?

Joaquin van Peborgh - **33:59**

Yeah, the idea is how they build their profile and show what they've done. And as I said before, they can share ready. If there's something they've already done and they just want to share it, they can always share it through a file. But they can also go through this idea for this to be very easy in which you can always go through multiple choice. But you can also write and you can handle this through. I'm using the arrows in my keyboard, which is really good. But you can also use your phone, of course to complete this and it should be. Be easy. Right. So let's say, you know, it's a sort of, you know, long term organization. They have six to 15 people. This is maybe they've done some projects. Right. And based on this, they can share this.

Joaquin van Peborgh - **34:46**

As we start doing this, it starts getting information and based on what you share, it adapts it and asks different questions. Right. So it is that maybe, you know, in 10, 15 minutes you end up doing a whole profile. You can do it at scale just by sharing this in a way that's easy for them to complete. We're working on this to be, of course, faster and better. It's just, you know, a prototype that takes some time as it processes things. Right. So we've done the first one. Now the.

Julia Caon Froeder - **35:14**

So yeah, for the girls that already know that the ideas that we have for the five meetings, this could be the tool for the organizations to log into. Our group of organizations like step zero is putting information here so we can select you based on this information.

Joaquin van Peborgh - **35:37**

Yeah, Step zero could be the diagnostic in which you know what they're doing, who's a person, what they've done so far. They can share everything. So you have enough context. Right. And you can navigate to those. Once you have this, you can also highlight it in. Let's say you're doing this public page. It's like, okay, these organizations are participating is what I've done and then they can do it. So this case, let's say a name I can do. I know there and I will go to English. But mission is to help the neighborhood, whatever. And then do you have some. Yes, we have some. Mostly social. Right. And some climate. And they have, let's say very little technical experience. Right. So that already starts, you know, building the scorecard that we can think about afterwards. Like all of this we can change very easily.

Joaquin van Peborgh - **36:33**

Okay, what type of information do we want? Do we want to score them in some way to know what type of support they would need? Because this can also inform the meetings and the workshop that you're doing based on the diagnostic of the communities. You might change what you actually want them to learn about. Or you can include new things. Right. So now it's asking about what's the biggest problem. Let's say heat, in this case we could say is the biggest one. So we confirm that and then you have, let's say I can share afterwards.

Julia Caon Froeder - **37:10**

That last question is like, you can choose all of them if you want to.

Joaquin van Peborgh - **37:14**

You can choose all of them? Yeah.

Antônia Wallig - **37:15**

Okay.

Joaquin van Peborgh - **37:16**

Most are. You can choose all or one, depending on how you go. And all of this as, you know, it starts getting filled out as we go. Type of projects that you do, this varies. I know if you've handled sometimes forms, sometimes they're very hard to unify and use. Right. Okay, so now we're going to phase two. And it's like, okay, where are you actually working? And let's say where is which neighborhood? Fernando Das work Bonjesus. Okay, that makes sense. Which is in the.

Julia Caon Froeder - **37:48**

It's like a central area. East.

Martin Wainstein - **37:51**

Central east over here, Right. Maybe it was either sea or Bom Jesus.

Joaquin van Peborgh - **37:59**

Yeah, perfect. Yeah, they work in Bob Jesus. Right. And now it's going to see, okay, it's like, which neighborhood?

And then if you have an idea, like, where do you actually want to do your solution? Right, so it's going to look for schools, parks, things that could be interesting of where you could work. You could always add your own. So it's searching for parks, but maybe it's like, actually we're going to be working here and you can put that's where you're working and maybe you're working here. But also this park could be something so you can map it. It's like, so this is where we want to work. They can map it pretty easily if we don't find it beforehand. And they can share it. So that gets shared. And it's like, okay, it's going to be working in this neighborhood.

Joaquin van Peborgh - **38:47**

And already, since we already have a map of all the risks by map in Puerto R, you will know what are the risks of that zone. Right? So it's okay, you're working a zone where there's a lot of heat risks. Right. That will help when you're measuring impact. Right. So the person doesn't need to do a calculation to measure impacts. Like, hey, since you selected this site, we know that the impact of what you will do would be this. Right.

Julia Caon Froeder - **39:08**

So do you offer them the risks that are involved that they have not heard of and even be aware, but they're in a risk area for that Specific thing.

Joaquin van Peborgh - **39:18**

Yeah, we. And we can. Those are the things we can adjust to. Say, like, hey, you're in the risk area. Did you know about this? You can learn about this. Make sure those are things we can do. They have, like, there's. We have this information, but I think might be too technical. Right. So maybe, you know, doesn't make sense to be as technical, but maybe at least they can see which ones they are.

Julia Caon Froeder - **39:35**

And does the platform could. Can the platform offer us like a diagnosis of a general type of diagnostics on. On the specific territory, on other kind of things like health and. And yeah. Education. Like.

Joaquin van Peborgh - **39:50**

Yeah. So we have again, show on the.

Julia Caon Froeder - **39:53**

Map, overview of the territory.

Joaquin van Peborgh - **39:55**

We have some things already. Right. You can see, for example. Well, this is, you know, you can see the population, but there's also. Let me just find here. Right. So you can see, you know, census by neighborhood. So you can see like the poverty rate by neighborhood. And that can help. You can see where informal settlements are. There's something weird that happens when I hose over. You can see where schools are or parks, if you wanted to. There's a couple of things that we can think about more, but there's things that are already here. We need to find that. That's where it's helpful to talk to you is like, what's the way we need to package it? Right. Because having the map interactive is great if you're used to.

Joaquin van Peborgh - **40:35**

To handling maps and data, but maybe we need to find better ways of saying, okay, for you, this is maybe the way you can think about it,.

Julia Caon Froeder - **40:43**

Kind offering a report of the result of that. Like your territory in this moment looks like this and that, like a scorecard or something like that you can offer for even the leadership and for us, definitely.

Joaquin van Peborgh - **40:57**

Yeah, definitely. And those are things we can think of. So right now what I'm showing has like already some set faces in which you go, maybe we're going too early into thinking about the intervention. And maybe first it's like, let's think about the neighborhood. These are the risks. Okay, now you're going to have the workshop about interventions. Now think about your intervention. Let's do like, maybe there's. Maybe there's a cadence we can think about in which we do one thing. You do let's say first workshop for like do diagnostic workshop first. Let's say report workshop, second report, third workshop, third report. Maybe that's a way of thinking about the process. Those are things we can explore. In this case, it's asking to me about, so I selected some sites.

Joaquin van Peborgh - **41:45**

It's asking what are the names of the sites and if the sites already have a use. In this case, let's say it's Valio. So there's nothing there. So that could be done. It's helping, you know, identify where they want to work. And yeah, Anna, if you have any questions, just please go.

Ana Radzevicius - **42:04**

Yeah, I'm more thinking about then if Julia and Antonia, you think it would be interesting to have like the beginning of the tool and like locked. I'm thinking about the relationship of the functionality for the communities and the functionality for the Orchestrator. So it can help you from the beginning. You already use the tool in the first workshop where they can build their profile, but then it's locked until the Orchestrator review and liberate say, okay, you're ready for the next phase, which is this is the report. Does that make sense for everybody? And is this possible, Joaquin, for us to do this interaction between them and then they can unlock new faces for the communities?

Joaquin van Peborgh - **42:56**

Definitely. I think it's a good idea. And it could be sort of tied to the workshops. Right. So in the coordinator view, maybe say, okay, we unlock this now. We unlock this now. We unlock. And you invite people to go. So yeah, this continues as I show and start talking about the size. It's small size. Is there anything another question?

Julia Caon Froeder - **43:18**

Sorry, does like the profile is like save that forever. It's not a conversation that whenever you leave the platform, it goes away. You have that.

Joaquin van Peborgh - **43:26**

Yeah, it will be ideally we saved forever and you will see it as a coordinator, you could see all the profiles and all of those things could be saved. So it's, it's saved. I just restore it every time, but it's actually saved. So okay, you go. If you go back, let's say I close, open up, I see it again. Like those things don't get lost. Right?

Julia Caon Froeder - **43:43**

Like, I don't know how to have this information now I'm going to have to it.

Joaquin van Peborgh - **43:48**

You can always, you know, guide it as well. Like right now I'm doing all the options it gives me, but I can always write whatever I want and it would understand it. Right? It doesn't need to be like, I don't know if you have it in Brazil as well, but in Argentina, you're talking, you know, to health provider and you can only, you know, answer some things. If not, it doesn't understand here, it will understand anything. Right. So in this case, you know, I can say, you know, I don't understand.

Julia Caon Froeder - **44:13**

Maybe the second thing is could be nice for the person to understand, like the path that is happening. And like, I'm. I've done 50% already, so it's just like this part for me to do it.

Joaquin van Peborgh - **44:29**

Definitely. Yeah. The faces, maybe it's not very clear, but here you can see the phases you're doing and how you've. What. How much you've done so far. So three from seven, Right. But as I said, you can write whatever and it should understand. It will come back to you and say, like, oh, you know this is what each of this means, right? It's like, you know, is it here, right? Is it a wetland? Is it has this. Have this. Does it have this or not? You know, based on this you can go, right? So you can continue, like everything you can do, it can explain and explain more. So, you know, that's a bit of the flow. What we have is like, and how this works, right.

Joaquin van Peborgh - **45:11**

It's like we have a sort of recipe we give to the AI and the AI creates the questions based on the recipe. That recipe is very easy to change. Right. So once you start thinking about the workshops you want to do and the goal they want to achieve, we can change that. You know, we can change that recipe based on what we want and we can build those steps as the recipes. Right. So I think something that we can talk about, it might make sense, you know, in the remaining minutes as well. Well, it's like, what are you to learn more about from your side? What are your plans? Right. How this could fit. Right. Because this is one, you know, diagnostic we sort of made up, let's say, in a sense. Right.

Joaquin van Peborgh - **45:53**

But it needs to be one that will be useful for you. So if there's anything you can share, anything you want to do, we can do it. This, what it does is, you know, at the end you should finish and have like this assessment, which I think is valuable for Villaflores to have of the communities. Like, oh, this is how they're. How they compare, how they stand. You could end up with this. Right? So let's say, you know, and in.

Julia Caon Froeder - **46:15**

This case we are talking like on a diagnosis based on risks. On climate risks.

Joaquin van Peborgh - **46:22**

Yeah, climate risks and also organization maturity.

Martin Wainstein - **46:25**

Yeah, right.

Joaquin van Peborgh - **46:26**

In a sense of like, how. How well prepared they are for some of these projects. Right.

Julia Caon Froeder - **46:30**

And if, like we get on other projects to talk about, like entrepreneurship on the community, you can add another layer later on.

Martin Wainstein - **46:38**

Yeah, right.

Joaquin van Peborgh - **46:40**

You could have the assessment based on the different. You know, profiles there. Right. Then at some point, you know, when you get to phase three, which I think we're about to get, it helps you choose what type of interventions you can do based on your site. You can learn about them. Maybe I can skip to that. Right, Let me see. This would work.

Julia Caon Froeder - **47:01**

When you're talking about kinds of nbs, you're talking about the kinds of nbs the organization already does or the potential for doing NBS in your specific region.

Joaquin van Peborgh - **47:15**

It could be both, right. In this case, it's the potential of which ones they could do. So here it's like recommending, hey, you can do Florida Survanas. Correct. There's others you can do. And maybe if you don't know, you can just say, help me decide. And here you can learn more about them. Right. So, okay, what's urban forest? Right. These are things we need to finish translating. Right. But you can see, okay, this is what I could do. Maybe this is too technical, but you can see, okay, how much does it end up? Does it usually cost? Where are the climate benefits for it? Are there? What do you need for it? What are the. How much does it take to do? Right. It's like, okay, you know, I will do this one. Right. So.

Julia Caon Froeder - **47:58**

And can you create a future of if that can be implemented on private or public land? Because I understand that they have different levels of nbs that you can do, like in your own house and. And the other ones that you are going to need to talk to the same.

Joaquin van Peborgh - **48:16**

Yeah, definitely. And those are the things that makes sense. We learn as we go with you. Right. And as I said before, everything you're filling out can be changed. Right. Let's say actually your name was different. You can change it. Everything can be very easily edited and once you edit, it propagates. So, yeah, I think with the remaining time, I don't know if there's anything we want to add. The step, especially if we talk about it takes some time to fill out, But it makes sense to think about it. I think there's a lot of very good feedback for us to process and reinterpret how this could be. I think there's a really good things to say, but maybe makes sense also to hear from you as well.

Joaquin van Peborgh - **49:13**

After Martin talks about, you know, if you have already, let's say, an agenda of the workshops you want to do, the type of organizations you want to involve, the type of objectives, goals you want to get out of. Right. Those things you can share. We can also start, you know, processing that into. Into something that makes more sense. So you feel like it's more, let's say, compatible with the things that you're doing. Right. And probably will get even more feedback from that. Yeah, Martin?

Martin Wainstein - **49:47**

Yeah, I think with this meeting, I have a sense that we're getting a lot closer to. To have some working meetings, which specifically alludes to what Joaquin is saying. And I am going to back us from like an end goal mid term angle, which is from what you said, Fernanda, from everything we've talked in the past. I am sold. Oh, did you want to leave?

Julia Caon Froeder - **50:15**

Yeah, she just told her she's trying to reconnect.

Martin Wainstein - **50:19**

Okay, I'm. I'm sold that our anchor City hall partner is Luis Carlos and the Office of Innovation because you're the ones that are most community connected. Clayton Will. Luis Carlos has a strong position and we have to have clarity of what we want to ask from them. We want them to be the Sherpa of the project. We want them to be the coordinator with the other City hall initiatives and help us co produce and therefore further. What I'm saying is that I'm told that the Office of Innovation is the house for this. From a government standpoint, we have to have a clear ask. And once we have a bit of their formal, like, yes, like this is also part of our mandate, this is helps 100% what we're doing. We can help, we can co produce. Let's go.

Martin Wainstein - **51:20**

It makes sense to then go to say, hey, we're working with the Office of Innovation. This is the scope of we're going to do with them, but this is something that's fundamentally. We're going to have visibility on your end, blessing on your end, but also some coordination because it relates two things that are part of the plaque. You know? Yeah. Community might not be the focus of smamus and it makes sense because they are dealing with innovation, not community, but flooding, heat.

Fernanda Scur - **51:47**

You mean environment, right?

Martin Wainstein - **51:50**

What did I say?

Fernanda Scur - **51:51**

Innovation.

Martin Wainstein - **51:53**

Oh, sorry, yeah, Environment, right. Yeah, they deal with environment. Right. So it makes sense. And we also want to engage with Secretary of Planning to have the Office Innovation to make that bridge. Because the of Innovation will benefit from saying, look, we're co producing this with the community and we have the potential of turning this in between a $1 million project to a $10 million project if we really do it in sync with security. So to do that, I think what makes sense is we need to have our narrative clear, aligned. So maybe a deck that we explain. Kuber not what we explained it before, which was sort of the basis and it was conceptual, but like, we're going to run this pipeline, we're going to work with community. Villa Flores will be doing this. We're using advanced technology for da, da, da.

Martin Wainstein - **52:47**

The outcome is going to be something that is, you know, important. And we're going to present it at the end of the year at cop, with Portalegre as the most, you know, climate, community, advanced city in the world, whatever. Just something that politicians like to hear.

Fernanda Scur - **53:02**

Yeah.

Martin Wainstein - **53:03**

So we have to put together this narrative and I think that's going to help us create the alignment because I think we're starting to get a little bit clearer or what Villa Flores will do, what Pixara will do, what Open Earth will do, what role this tool has, what type of organizations we will be screening. And in our conversation yesterday with the rest of the Pixar team, we talked about part of it is the community screening. Right. And Pipeline, which will oversee, but there will be other nature based solution projects that are relevant for flooding, heat, et cetera, that might not be community led, but we still want to map them because we have the opportunity of combining them into a larger portfolio that forms the basis of a bigger fund that will have a scale that is more relevant, for example, secretary.

Martin Wainstein - **53:58**

So all of these things need to be baked into this narrative, into this sort of decor presentation. And I sense that probably the next meetings could be more working meetings towards what do we need to flesh out from that? And it also perhaps doesn't even need Joaquin and I. And it could be, you know, in Portuguese between, you know, Ana, Julia, whoever can join just to get to that, because I think it was going to be something that's going to help us a lot.

Then we go, we have it ready. Fernanda, when Kami's here, you go again. Similar to what you did with Yash. I don't know what ended up after that meeting. Actually, I wanted to ask you, like, what was the next step that you aligned with Clayton, with Miscarlos and the other people that were there?

Martin Wainstein - **54:41**

Hovana was in that meeting, which makes me think great, like that. That means that SMAMUS will join a meeting that's convened by Office of Innovation, right?

Julia Caon Froeder - **54:51**

Yes.

Martin Wainstein - **54:52**

So I think we can get to that meeting with something very clear. We presented at a high level, but now we will have something very concrete and we can show what this will look like on the ground. And the other part that's important is what Joaquin is preparing is for internal screening. But then eventually it's relevant to whoever's going to fund the project in terms of what a funder requires if they're going to be looking at a pipeline them.

Fernanda Scur - **55:20**

So I am fully aligned with what you're saying. This is what I have been saying. I think, Julia, you heard me saying a larger portfolio of projects, right. That can absorb a larger amount of funding. So we are very much aligned. This is exactly what I'm doing right now. I'm trying to understand exactly the scopes of all of us to build a clear and very high level narrative so I can lure our. Our dear Innovation office, isma moves etc into new meetings. Actually, nothing came out of those meetings that you were in, Martin, yet. Because I was waiting for us to be structured enough to say, hey, now there's more, let's talk. So I'm actually working on those email introductions to Cami in which I will use those with that narrative. And then I want to.

Fernanda Scur - **56:15**

We want to present you what we're doing and then we can clearly say to each one of these stakeholders what we expect for them in terms of collaboration. Right. So I think we are aligned on that. This is what I'm working on. Exactly. Okay, so maybe let me. Let me work on this. And I was gonna share that with Andrew as well and Cami and then maybe you as well, Martin. And we can all be really. Of course. And Villaflo. So we can all be aligned on what the discourse is on a multi stakeholder partnership like this. This is really important. And the other thing, I actually had a question for Joaquin, but not for now because I have a hard stop.

Fernanda Scur - **56:55**

But in terms of the criteria for the platform for the NBS projects, for the orchestrator organizations, you know, like were talking maturity level, whatever. So Andrew shared with me this Excel list. Is this something he. They have done? Because I'm not on those meetings. So is this something that you've guys done or is this something that he came up with? I mean, I can ask him that, but I just want to make, you know, I want to know if that came from the platform or is this. If he wasn't shared with you. I think I should share with you.

Ana Radzevicius - **57:35**

For. For the scanning, right? Yes. No, this is something that they shared with us, but is a suggestion from Pixer. Yes.

Fernanda Scur - **57:44**

Okay, cool.

Ana Radzevicius - **57:45**

So it's. It's not incorporated in the platform. I think I would suggest two. Next step.

Fernanda Scur - **57:51**

No, no. It's just a set of. It's a set of criteria. It's just the names of the criteria to be considered.

Ana Radzevicius - **57:56**

Yeah, yeah. No, I'm talking about next steps for us next week because I understand that you will have the meetings on the week of the 27th, right, Fernanda, with Tommy. So I would suggest that maybe we can have a meeting, the two of us, where I can share a little bit what we have been talking with Andrew in terms of implementation timeline and we can work together in this like narrative and you can also show me like, I don't know, Tuesday, something like this. And on the other hand we can, Julia and Antonia, maybe receive from you overview of like.

Ana Radzevicius - **58:34**

It's okay if it's like something that you're still thinking about, but just for us, you have an overview of what you're thinking for the meetings and also if you can add on this document, like ideas of what you would like the tool to do and to help you with. So Joaquin can already start thinking about product enhancements and a little bit going further of what we just started today for next week. And then we have a next meeting, not the next week, but the

other week. So you have a little bit more time to do that. So I don't know if you think it's possible to send us some information until the end of the next week and then we have some time to analyze. Is that clear or possible? And make sense. Antonia and Julia.

Antônia Wallig - **59:26**

Yes, Anna, I think it makes sense. We don't have it all set up with Pixera yet, so we didn't start the work properly. We are waiting for some documentation.

Ana Radzevicius - **59:45**

Okay.

Antônia Wallig - **59:46**

But we have a lot going on in our minds already and we have been talking about a lot. But we are also. I was thinking about that because we are in the Palafita program. The first action is Mikomta. So we are gathering inscriptions for this first fund that we are going to give to 20 organizations from our territory, the four districts. We have already 40 inscriptions. We are going to have the. The call open until Monday and were really discussing about that we should have a map of the organizations that are going to receive the equipment documents for Miconta. And these are organizations or small business that have community based projects or social environmental projects.

Antônia Wallig - **01:00:52**

So I think this is a very good beginning because we already have these inscriptions and we have the contact with these organizations, but they are really from the fourth district, strict territory. But I think it's a good start and we can compromise also to send you some informations about what we have in mind for. For the encounters from the meetings. And I was also thinking if we maybe I don't know if that's a possibility that we can have a look in the platform ourselves. Like I don't know if this is possible Joaquin that we can see a little bit more like and click and navigate a little bit more and go deeper to understand better and maybe applying some solutions or ideas that can come from a little bit more studied.

Joaquin van Peborgh - **01:01:59**

Definitely I share the link there. We could also share it by email afterwards. So you have it.

Fernanda Scur - **01:02:04**

Yeah.

Joaquin van Peborgh - **01:02:05**

You can explore the database. Sorry you can explore the. The platform always you know, in mind of like it's a prototype that we can test things you know and see it. If you're. If you want to go to the. So the only comment would be if you want to go to the city view, always choose this sample path.

Martin Wainstein - **01:02:28**

Right.

Joaquin van Peborgh - **01:02:30**

You can use sample path and you will have to choose the nature based solution 1 the one with the color. But if you go back and you go to the. As I was showing before, I think.

Julia Caon Froeder - **01:02:42**

Here we need to perfect.

Antônia Wallig - **01:02:44**

That's amazing.

Joaquin van Peborgh - **01:02:46**

The community based ones you will see in here it's a bit simpler. You see that's broken or you want to change or like every. Any insight is useful for us. And if you see this one and you want to start from scratch. If you see it's already started, you can start with this restart and you can also do it afterwards.

Julia Caon Froeder - **01:03:06**

Perfect.

Antônia Wallig - **01:03:07**

I would just start with some coordinators from our Palafita program. Sorry, like can we share this with.

Joaquin van Peborgh - **01:03:15**

Yeah.

Antônia Wallig - **01:03:15**

Three or four more people that are coordinating the Palafita.

Joaquin van Peborgh - **01:03:20**

The the more you show it the better for us because you get more feedback.

Martin Wainstein - **01:03:23**

Yes.

Antônia Wallig - **01:03:24**

This one is really going to like make exactly as an. As a user and can bring us some very.

Joaquin van Peborgh - **01:03:33**

Data so a lot of details. So I already have some ideas based on what you share. But if there's more things that you would like to see as coordinator. Right. Like okay, these are things you want to make public. These are the actual things we're working on. Like even like sharing information about Miconta like how are you doing it? How maybe we can find ways how to also adapt it to this.

Ana Radzevicius - **01:03:54**

Perfect.

Martin Wainstein - **01:03:55**

Yeah.

Ana Radzevicius - **01:03:55**

Think about what I will do then just for our organization of the work. I will create like a Google Docs shared with you like with the link with a little bit of context and some sections like comments, doubts, ideas, et cetera. So every coordinator can work on there and we don't lose any feedback because everything is very important for us.

Antônia Wallig - **01:04:17**

Amazing. I think that then we have a.

Martin Wainstein - **01:04:19**

Very good material and maybe Anna we can just share Google Drive folder inside the Cougar program folder, which we can use then to create this common deck that we do together because it will be in Portuguese. And I think that the last I was gonna say before Fernanda left that it's good that Kami is coming, but the last meeting was also in English, and that's because me and Yash was there. I think it's good that last meeting that we had with Carlos Villaflores wasn't there. So the next meeting, it would be good to have Villa Flores in representation of the larger community and UN and representation Open Earth. So it could be entirely in Portuguese. I just think that's just gonna make things a little bit faster.

Ana Radzevicius - **01:05:08**

Agree.

Antônia Wallig - **01:05:09**

Good.

Ana Radzevicius - **01:05:09**

Agree.

Antônia Wallig - **01:05:10**

Good.

Ana Radzevicius - **01:05:11**

So I will prepare this and send you via WhatsApp and we keep in touch to book a meeting of next week, the other week. And I will align with Fernanda the narrative so she's ready for the engagements.

Antônia Wallig - **01:05:26**

Thank you.

Ana Radzevicius - **01:05:27**

Thank you so much.
